

## Symphony AzimaAI's Performance 360™ Takes 2 Additional Award Honors

**Woburn, MA – August 10<sup>th</sup>, 2020** – Symphony AzimaAI announced today its Performance 360™ products have been selected finalist for two Products of the Year Awards by [Hydrocarbon Processing](#).

**Performance 360 was selected for in the Best AR/VR/AI Technology category and the Best Digital Twin category.** It delivers process performance & health management solution for the process industries. Performance 360 uses IIOT & artificial intelligence to predict how a process will perform in the future, and identify potential process disruptions, quality issues, and trip conditions - with enough time to not only to proactively act to avoid trips, lost batches and decreased quality. It also delivers near real time insight to adjust operations for optimized plant performance to improve yield.

“Our team has been laser focused on delivering a unique process performance & health management solution harnessing the power of AI and our process industry know-how,” said Dominic Gallelo, CEO of Symphony AzimaAI. “It is truly gratifying to see the tremendous value we are delivering to our users.”

Winners for the Hydrocarbon Processing Product of the Year will be announced October 1<sup>st</sup>, 2020.

### About Symphony AzimaAI

For 50+ years, SAAI have been innovators of industrial insight - from machine component health to plant performance optimization. This has been enabled by a talented and rapidly growing team of deep domain experts in process industries, discrete manufacturing, IIoT, and artificial intelligence. SAAI is a company of innovation and firsts including:

- The largest rules base and fault condition library for machine health
- High accuracy data capture devices
- The industry's first complete cloud enabled PdM program solution
- The industry's largest data lake of machine health data
- The use of 3<sup>rd</sup> Generation AI to bring even higher fidelity into asset performance management and plant operations optimization.
