

## Symphony AzimaAl's Performance 360<sup>™</sup> Takes Mining Magazine Award Honor

**Woburn, MA – January 4<sup>th</sup>, 2020 –** Symphony AzimaAI announced today its Performance 360<sup>TM</sup> product has been selected as a finalist in Mining Magazine Product of the Year Awards.

Performance 360 was selected as a finalist in the <u>Software category</u>. It delivers process performance & health management solution for the process industries. Performance 360 uses IIOT & artificial intelligence to predict how a process will perform in the future, and identify potential process disruptions, quality issues, and trip conditions, with enough time to proactively act to avoid trips, lost batches and decreased quality. It also delivers near real time insight to adjust operations for optimized plant performance to improve yield.

"Mining companies face tremendous challenge in running grinding circuits. This has typically been a fixed control process that is set and run, not taking into account ever changing conditions under which the operation actually takes place," said Dominic Gallello, Chief Executive Officer of Symphony AzimaAI. "Performance 360 delivers tremendous value to our users by using AI to dynamically monitor and provide recommendations to the control room operator, to achieve optimum performance leading to material increase in yield and throughput."

Winners for the Mining Magazine 2020 Awards will be announced January 25th, 2021.

## About Symphony AzimaAI

For 50+ years, SAAI have been innovators of industrial insight - from machine component health to plant performance optimization. This has been enabled by a talented and rapidly growing team of deep domain experts in process industries, discrete manufacturing, IIoT, and artificial intelligence. SAAI is a company of innovation and firsts including:

- The largest rules base and fault condition library for machine health
- High accuracy data capture devices
- The industry's first complete cloud enabled PdM program solution
- The industry's largest data lake of machine health data
- The use of 3<sup>rd</sup> Generation AI to bring even higher fidelity into asset performance management and plant operations optimization

Our solutions span Predictive Maintenance and Process Health & Optimization, including data acquisition devices and software.
